
Wireless Internet Home

Wireless Internet is an Internet connectivity received through a wireless CPE (Customer Premises Equipment) installed on your roof. This CPE points to our nearest tower to connect to Internet and other services.

This service is offered if you are going to use more data at night from 07:00 pm and 06:00 am, as the Internet connection is fast enough to stream Netflix, ShowMax, YouTube or any service you choose. This service has very low latency so is also great for gaming.

- Get double the data with night data for the same price.
- Optimised specifically for performance.
- Low contention and latency.
- Great for video streaming and online gaming.
- Burst speeds so you experience a speed of up to double your service speed.
- Fantastic support via our call-centre backed up by local technicians. Online account management.
- Online account management. Usage notifications, SMS top-ups, ticket logging and service creation.
- Night time data speeds up your daily network use, as you can now schedule your downloads and backups for after hours as this will relieve strain on the network during the day.

Why shaping is necessary for an ISP ?

No Shaping

A totally unshaped Internet connection is usually advertised as an advantage but its NOT. If your connection is being abused, the service you want to use online will not necessarily work correctly. This means your ISP's network is also not managed optimally.

ISP Blanket Shaping

ISPs with the right equipment try to shape your connection so that you get an overall good Internet experience. This does not work because the provider does not know how you use your Internet. They largely guess what you use it for. For example, if you are a gamer and the rest of your family is watching videos on Facebook, this will result in high late

Jenny Priority Flow

We provide you with a control panel to shape your own Internet for optimal performance.

Here are the default settings and options available for the different services.

[Jenny Priority Flow PDF Document](#)

Example Gamer

Simply log into your My-Jenny control panel and tick boxes to change your shaping on your Internet connection.

If you are a gamer and have other people using Netflix and YouTube in your household.

You can select: [x] Gaming High Priority

This will allow games to get first priority on the Internet connection then Netflix and Youtube can use the rest.

Pricing

Uncapped 3-6 Mbps with 100 GB Turbo GB
E 899.00

Uncapped 3-6 Mbps with 200 GB Turbo GB
E 1299.00
