# Wireless Business Lite

Wireless Internet is a Internet connectivity received through wireless Customer Premises Equipment (CPE), installed on your roof. This CPE points to our nearest tower, (Jenny High-site), which in turn connects users to the Internet and other Jenny services.

Wireless Business Lite service is perfect for small businesses which requires a good daytime service with no need for night data, with the benefit of a higher bursting line speed.

If you are not maxing out on your service, line speed will burst up to twice as fast to retrieve data, effectively giving you the experienced feeling of running at almost double your service speed.

- Optimised specifically for business use
- Low contention ratios
- Lightning fast with very low latency
- We are a first-tier service provider and cater to a businesses stringent security requirements.
- A connection that bursts, so you can experience a speed almost double your current line speed.
- We offer reliable service and local support
- A connection that bursts, so you can experience a speed almost double your current line speed.

## Why shaping is necessary for an ISP ?

### No Shaping

A totally unshaped Internet connection is usually advertised as an advantage but its NOT. If your connection is being abused, the service you want to use online will not necessarily work correctly. This means your ISP's network is also not managed optimally.

### ISP Blanket Shaping

ISPs with the right equipment try to shape your connection so that you get an overall good Internet experience. This does not work because the provider does not know how you use your Internet. They largely guess what you use it for. For example, if you are a gamer and the rest of your family is watching videos on Facebook, this will result in high late

### Jenny Priority Flow

We provide you with a control panel to shape your own Internet for optimal performance.

Here are the default settings and options available for the different services.

[Jenny Priority Flow PDF Document](#)

---

## Example Gamer

Simply log into your My-Jenny control panel and tick boxes to change your shaping on your Internet connection.

If you are a gamer and have other people using Netflix and YouTube in your household.

You can select: [x] Gaming High Priority

This will allow games to get first priority on the Internet connection then Netflix and Youtube can use the rest.
